SUBJECT: Oxford interest in Green Filterless Air Purification and Remediation Solution for Phase II

Oxford is interested in evaluating working with Clean Air Zone on a project considered for Air Force SBIR Phase II funding award. Clean indoor air is very important to the hotel industry.

We have been advised that modern indoor air spaces are polluted and contaminated to one degree or another, and that there are many studies confirming this. We believe that this "bad air" is responsible for poor health, sickness, a lack of energy and ability to maintain a high cognitive state. Current mechanical and filter-based systems are not always effective in removing contaminants from the air space. Pollutants in the form of Biologicals, Mold, Pollen, Dust, Dander, and many other contaminants in addition to VOCs (Volatile Organic Compounds) can occur. Odors and smells exiting from these contaminants are often offensive to hotel guests.

I. Oxford is interested in learning more about a potential AFWERX/AFVentures Phase II Competitive Performance project with Clean Air Zone (CAZ) in mitigating against all of the above contaminants. We understand that CAZ's bio-mechanical system improves over time, conventional mechanical systems degrade over time, they just don't work well. They offer a biological approach to a biological problem.

If an AFVentures/AFWERX SBIR Phase II is awarded for this topic AF212-CSO1, Oxford will consider supporting a Phase II in reviewing the progress and updates of the project for commercialization and use of the CAZ system.

It is also understood that the signer / stakeholders of this support letter are under no contractual obligation.

A handwritten signature in black ink that reads "Lawrence B. Cummings".
